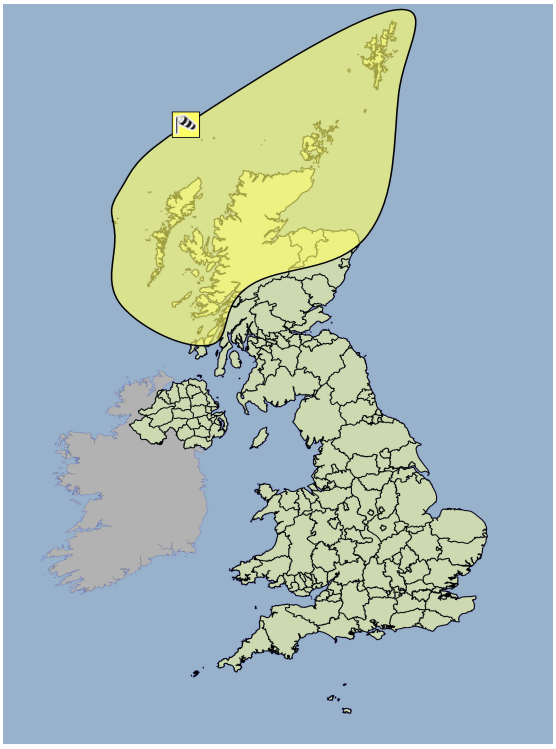
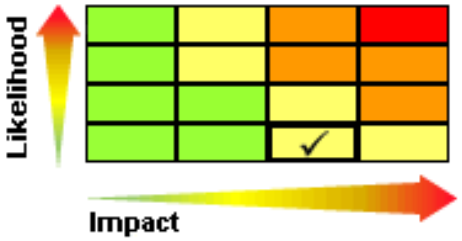
National Severe Weather Warning Service





Chief Forecasters Assessment
There is the possibility of a more vigorous area of low pressure passing close by northwest Scotland during Sunday. At present there remain some differences between the computer models regarding the timing and intensity of this development, but northwest Scotland looks most at risk.

The Met Office have issued a **Yellow Alert** of **Wind**

Valid from **00:05 on Sun, 15th Dec 2013** until **23:59 on Sun, 15th Dec 2013**

Following severe gales on Saturday there is the risk of further very windy weather across the far north and northwest of Scotland on Sunday. There is the potential for gusts of 70 to 80 mph, and perhaps more in exposed areas.

There remains considerable uncertainty as to the extent of the very strong winds. However the public should be aware of the risk of further disruption to transport and other outdoor activities and are also advised to monitor the website for updates in the coming days.
